## Card Readers

### CCI Card Readers are designed specifically for Laundry Equi

Laundromats are public places, and in many cases the equipment that is installed will be heavily used and abused by the customers. Our Card Readers have been specifically designed to withstand the Laundromat environment.

The front bezel of the card reader is made of a durable ABS plastic, which is engineered and tooled to easily fit onto most brands of Laundry Equipment.

The LCD display is also protected by a clear Lexan shield. This material is also used to make bulletproof windows.

The card reader opening was designed to deter foreign objects from entering the device.

Our card readers are designed to fit any make or model of commercial coin Washer-Extractor or Drying Tumbler.

CCI card readers also don't draw power from the host machine they are mounted to. This makes the reader flexible and easily adaptable to almost any coin operated device.

The neutral color of the bezel looks great on any machine you mount it to.
